

Overlapping generations: one threshold is applied to all age classes

Illustrative numbers

class 1: 1000 candidates, mean 0

selected $1000 \times P(Z > 2.0) = 22.8$

class 2: 500 candidates, mean -1.2

selected $500 \times P(Z > 3.2) = 0.34$

x_s is solved so that the total
equals the number of sires wanted
